

[PRD] Autonomous AI iGaming Support Agent

This document establishes product and technical requirements for the enterprise-grade Autonomous AI Customer Support Platform for regulated iGaming operators.

Platform Vision

The fundamental objective of the platform is to transition iGaming support operations from traditional information retrieval (basic chatbots) to autonomous action execution (AI Agents). While legacy chatbots merely provide static text or direct players to FAQ articles, the AI agent operates as an autonomous team member—executing end-to-end back-office procedures, evaluating operational risk, enforcing compliance, and interacting directly with Player Account Management (PAM) back offices, payment gateways, and CRM systems in real time.

1.1 Key Business Goals & Performance Benchmarks

- **Autonomous Resolution Rate:** Achieve 80% to 90%+ total support automation with 100% resolution without human intervention for standard player inquiries.
- **CSAT & Player Satisfaction:** Maintain a Customer Satisfaction score of 4.8 out of 5.0 through empathetic, natural language conversations tailored to player personality and context.
- **Manual Support & Workload Reduction:** Deliver a 40% reduction in manual support requirements
- **Instant Response Latency:** Deliver instant AI replies across all channels, eliminating queue waiting times during peak betting traffic.
- **LTV & Retention Acceleration:** Transform support into a growth engine by leveraging proactive player engagement, personalized retention offers, and automated milestone rewards.

2. User Personas & Operational Stakeholders

Persona	Primary Goals	Key Operational Pain Points	Expected AI Capabilities
Game Player	Instant resolution for missing deposits, withdrawal holds, bonus crediting, and document checks.	Slow manual queue times, unhelpful static chatbots, generic non-actionable answers.	24/7 autonomous action execution, instant responses in english language, empathetic context-aware dialogue.
VIP & Retention	Maximize high-LTV	VIP players queuing behind	Behavioral signal tracking,

Persona	Primary Goals	Key Operational Pain Points	Expected AI Capabilities
Manager	player retention, prevent churn, and deliver timely personalized perks.	routine tier-1 queries; disengagement detected after churn occurs.	automated milestone bonus delivery (e.g., first deposit, VIP tier), proactive re-engagement offers.
Compliance & RG Officer	Ensure 100% adherence to gaming regulations, enforce duty of care, prevent problem gambling.	AI hallucinations, missed gambling distress cues, non-compliant promotional claims, un-audited bot actions.	100% interaction monitoring, hard-stop distress triggers, immediate self-exclusion routing, full SOC 2 Type II audit logging.
Support Operations Lead	Maintain low response times, control operational overhead, gain actionable product insights.	High seasonal turnover, massive traffic surges during major events, disconnected back-office tools.	One-click API integration with back offices and CRMs, AIP workflow execution, automated feedback loops for product friction.

3. Core Engine: AI Procedures (AIPs) & Autonomous Workflows

The backbone of the Support AI platform is the **AI Procedures (AIPs)** workflow engine. AIPs are structured, declarative workflows that formalize how support scenarios are executed. Rather than scripting complex decision trees or training models on thousands of historical transcripts, AIPs describe operational processes in human-readable form, enabling the AI engine to execute multi-step workflows autonomously and reliably.

3.1 AIP Operational Architecture & Guardrail Structure

Every AIP embeds explicit preconditions, execution steps, forbidden action boundaries, and post-execution logging directly into its workflow design:

- **Preconditions:** Mandatory state checks (e.g., identity verified, RG flags clear) that block unsafe workflow initiation.
- **Forbidden Actions:** Hard guardrails preventing unauthorized state changes or invalid financial transfers.
- **Responsible Gaming (RG) Monitoring:** Continuous evaluation across 100% of workflow steps.
- **Intelligent Escalation:** Seamless transfer to human agents with full conversational and system

context whenever human judgment is required.

3.2 Sample AIP Specifications

AIP-01: "Where Is My Deposit?" (Missing / Pending Deposit Investigation)

- Step 1: AI agent verifies player identity and account authentication status.
- Step 2: Queries Payment Service Provider (PSP) API for real-time transaction history.
- Step 3: Cross-references PAM back-office balance logs and CRM deposit state.
- Step 4: Evaluates transaction condition:
 - If COMPLETED: Explains provider settlement timing and confirms balance update.
 - If PENDING: Informs player of expected clearing window and network status.
 - If FAILED: Initiates automated refund process or escalates to Payments Team with structured context.
- Step 5: Logs interaction in helpdesk (Zoho/Zendesk) and automatically updates ticket status.

AIP-02: Withdrawal Status & Hold Explanation

- Step 1: Queries PAM back office for pending withdrawal requests and lock flags.
- Step 2: Identifies delay root cause (e.g., unfulfilled wagering requirements, missing KYC docs, manual risk review).
- Step 3: Clearly details exact steps required for resolution (e.g., "Remaining wagering balance: \$25 on Slots").
- Step 4: Guides player to complete action or routes to risk team if manual approval is required.

AIP-03: Proactive Loyalty & Goodwill Bonus Crediting

- Step 1: Evaluates player eligibility against CRM business rules (e.g., Smartico / Flows integration).
- Step 2: Checks player account status, RG limits, and bonus eligibility flags.
- Step 3: Grants promotional spins or cashback directly via PAM API.
- Step 4: Confirms crediting in chat dialogue and sends celebration notification.

4. Proactive CX, CRM & Player Retention Engine [Optional]

Support AI redefines player support by operating as a proactive CRM and retention engine. Rather than remaining purely reactive, the agent continuously analyzes player behavior, session patterns, and engagement signals to deliver proactive interventions that drive Lifetime Value (LTV) and reduce churn.

Retention Pillar	Execution Logic & Operational Strategy	Business Impact
Churn Prevention	Identifies disengaged session patterns or	Measurable reduction in player

Retention Pillar	Execution Logic & Operational Strategy	Business Impact
	negative sentiment trends and automatically triggers personalized re-engagement offers before player abandons platform.	churn rate; extended player session lifecycle.
Proactive Milestone Delivery	Recognizes real-time milestones (e.g., first deposit completed, VIP tier upgrade) and delivers immediate celebratory bonuses or personalized messages.	Higher player engagement, improved brand loyalty, increased repeat deposits.
Multilingual Personalization	Supports 120+ languages natively with tailored tone and responses based on individual player interaction history and regional preferences.	Global operational reach across diverse markets (UK, DACH, LATAM, APAC) with 4.8+ CSAT.
Product Feedback Loop Integration	Aggregates support interaction signals to highlight recurring UX friction points and feature gaps, feeding insights directly to product and design teams.	Rapid elimination of UX friction, accelerating product improvements from support data.

5. Trust Layer, Security & Responsible Gaming Guardrails

Security, privacy, and regulatory compliance are built directly into the Cevro AI Trust Layer, ensuring enterprise safety across highly regulated iGaming jurisdictions.

5.1 Responsible Gaming (RG) Guardrails

- **100% Interaction Coverage:** Every player interaction is monitored in real time for gambling distress cues, loss-chasing sentiment, or problem gambling language.
- **Immediate Hard-Stop Protocol:** When problem gambling behavior is detected, standard generative responses freeze instantly.
- **Automated Self-Exclusion & Escalation:** Offers immediate cooling-off or self-exclusion triggers via direct API calls to the PAM back office, while routing the ticket to human RG specialists with top priority.
- **Duty of Care Support:** Automatically presents localized helpline details (e.g., BeGambleAware, GAMSTOP, local helpline resources) to ensure compliance.

5.2 Data Protection & Enterprise Security Architecture

- **SOC 2 Type II Certification:** Platform operates under verified SOC 2 Type II compliance controls.

- **Edge PII Masking:** Pre-processes incoming messages with real-time PII scrubbing to sanitize credit card numbers, passwords, bank details, and personal identifiers before AI processing.
- **Zero Data Retention & Zero Training:** Strict policy ensuring proprietary operator data and player dialogue logs are never retained or used for model retraining.
- **Comprehensive Audit Logging:** Every action, API call, and escalation event is immutably logged for regulatory audit trails.

6. Integration Stack & Technical Architecture [Will provide more detail Eng Arch]

Cevro AI employs an API-first orchestration architecture that sits seamlessly in the middle of the operator's existing tech stack—executing actions across back offices, helpdesks, CRMs, and payment systems without requiring infrastructure replacement.

System Component	Supported Platforms	Orchestration & Integration Scope
PAM / Back Office	Softswiss, EveryMatrix, White Hat Gaming, Custom PAMs	Fetches player balance, account state, transaction history, KYC status, and applies RG limits or self-exclusions via REST APIs.
Helpdesk & Ticketing	Zoho Helpdesk, Zendesk, Freshdesk	Creates, updates, categorizes, and closes tickets automatically; handles agent handoffs with full transcript history.
CRM & Automation	Smartico, Flows, Optimove	Triggers real-time bonus eligibility queries, issues milestone gifts, and coordinates retention marketing campaigns.
Internal Comms & Alerting	Slack, Microsoft Teams	Sends automated operational alerts, daily KPI summaries, RG escalation notifications, and system health status reports.

7. Non-Functional Requirements (NFRs)

- **High-Volume Scalability:** Dynamic elasticity capable of processing 80,000 to 100,000+ monthly live chats per operator, scaling seamlessly during peak sports events and tournament spikes.
- **Operational Availability:** 99.99% system uptime SLA with redundant multi-region cloud deployment.
- **Rapid Time-to-Value:** Full integration and AIP deployment achievable within weeks, delivering

immediate automation ROI.

- **[Optional] Multilingual Domain Vocabulary:** Native execution across 120+ languages with domain-specific handling of iGaming terminology (e.g., turnover, wagering requirement, cashout, RTP, accumulator, free spins).
